

# Your pallet transfer projects

At elcom, we offer comprehensive support to guide you through your projects.

## 1 - Solution development

We collaborate with you to define the optimal technical and economic solution, considering technical factors such as cycle times, environment, parts to be transported, and types of operations.

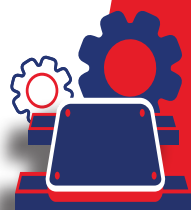

## 2 - Solution design

We prepare the quotation and 3D drawings, but you can also do this independently with access to online components. In this case, we can train you on the installation process.

## 3 - Assembly solution

We carry out pre-assembly, an exclusive service from Elcom. Our extensive testing and precise markings ensure quick and easy rassembling on-site.

## 4 - Commissioning and preparation for shipment

We propose an acceptance meeting in our workshop before the shipping to carry out technical validation of functions. We ensure also on-site installation if necessary.

## 5 - Implementation of the solution

We support the customer in the use, maintenance, and optimization of production from the start.

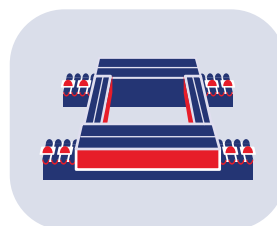

## 6 - Follow-up solution

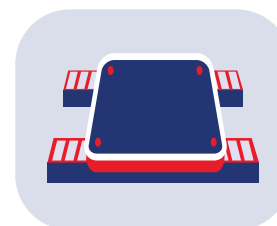

We ensure follow-up and traceability up to 20 years and a customized maintenance service. In the event of a move, in France or abroad, we guarantee the continuity of this service.
